LC DOSS

Report Narrative

DOSS recoveries for MS1 and MSD1 are not available due to an error in the sample spiking that caused additional surrogate spike to be added to these samples instead of DOSS spike. Good precision in the analysis was shown by the triplicate analysis of the sample 1009039-04, -04MS1 and -04MSD1 wherein all results for DOSS were non-detect.

The surrogate recovery results above the advisory recovery limit due to the additional surrogate spike added to the samples should not effect the sample results as DOSS was non-detect as mentioned above.

Standard procedures for quality assurance and quality control were followed in the analysis and reporting of the sample results. The results apply only to the samples tested. This final report should only be reproduced in full.

Reporting limits are adjusted for sample size and matrix interference.

Report Approvals:	
Richard McMillin	David Neleigh

Dioctyl sulfosuccinate, sodium salt (577-11-7)	U		19.5	1	09/20/10 09/20/10

This LC/MS/MS method is a developmental method that was created specifically for the Gulf oil spill by the Region 6 lab in conjunction with other EPA laboratories. Therefore it has not been validated with the normal rigorous procedures and performance data that an EPA method would normally complete before being released. Improvements will continue to be made to this method as more is learned about the nuances of this technique with these analytes and various matrices. Proper sample collection or preservation procedures have not been established and holding times are unknown.

Out of QC limits

Initial pressure in air analyses is the pressure at which the canister was received in psia (pounds per square inch absolute pressure).

The pH reported for Volatile liquid samples was tested using a 0-14 pH indicator strip for the purpose of verifying chemical preservation.

The statistical software used for the reporting of toxicity data is ToxCalc 5.0.32, Environmental Toxicity Data Analysis System 1994-2007 Tidepool Scientific Software.
